Advisory reports play a crucial role in supporting technically oriented issues, as technical expertise is key in providing opinions and analysis from a practical and professional standpoint. These reports offer precise analyses and reliable evidence that assist in making sound legal and administrative decisions. Here are the main reasons why advisory reports are essential

Digital Evidence Verification

- o In cases related to data breaches, cyberattacks, or digital crimes, it is essential to present credible technical evidence.
- o Advisory reports help in extracting and analyzing digital evidence such as email messages, system logs, and deleted files.

Supporting Legal Cases

- o Advisory reports provide in-depth technical analysis that can be presented to courts or legal authorities.
- o They help in identifying the perpetrator of a digital crime by linking digital evidence to the offender's information.

Cybercrime Investigation

- o In cases of security breaches, advisory reports assist in identifying the source of the cyberattack and how it occurred.
- o They provide accurate information about the exploited security vulnerabilities, helping to improve future protection measures.

Analysis of Technical and Commercial Disputes

- In technology project contracts—such as software and website development—disputes may arise between parties.
- Advisory reports assist in analyzing technical contracts and proving breaches of agreements or poor execution.

Improving Administrative and Technical Decision-Making:

- They provide clear insights into the performance of technical systems, helping companies and institutions make strategic decisions.
- They support the assessment of technical risks and offer solutions to improve performance, reduce operating costs, and increase productivity.

Supporting Intellectual Property Investigations:

- In disputes related to intellectual property rights for software and applications, advisory reports offer precise code analysis and help prove potential violations.

Enhancing Cybersecurity:

- Advisory reports assist in detecting internal cybercrimes, such as data leaks by employees.
- They provide recommendations to improve network and system security and prevent future attacks.

Advisory reports are not merely technical documents—they are powerful tools for supporting legal cases, improving administrative decisions, and enhancing cybersecurity. Whether you are dealing with a commercial dispute or a cyberattack case and need digital evidence analysis, advisory reports provide the accurate information necessary to make well-informed, evidence-based decisions.

Types of Cases Handled by the Expert

01 Telecommunication Network Cases

- Analysis of systems, mobile devices, wired and wireless networks, and servers.
- Disputes related to infrastructure cables, such as fiber optics and surveillance cameras.
- Investigation of connection issues and network outages.

02 Enterprise Resource Planning (ERP) System Cases

- Disputes regarding ERP implementation in companies.
- Inspection of technical system performance and proving faults or poor implementation.

03 Social Media Platform Cases

- Analysis and management of digital content.
- Disputes involving the distribution or rebroadcast of files, images, and videos.
- Investigations into defamation and electronic blackmail via social media.

04 Cloud Computing and Artificial Intelligence (AI) Cases

- Analysis of issues in AI applications.
- Disputes involving the use of cloud computing in business operations.
- Examination of cloud system performance and proof of failures or misuse.

05 Technology Contracts and Project Cases

- Disputes concerning software and website development projects.
- Software quality assessment and proof of technical defects.
- Analysis of technical contracts and proof of agreement breaches.

06 Intellectual Property Cases for Software and Applications

- Disputes involving source code theft.
- Investigation of intellectual property rights violations in software.
- Analysis of digital evidence to prove intellectual property ownership.

07 E-Commerce and Digital Marketing Cases

- Disputes involving e-commerce platforms.
- Investigation of online fraud.
- Analysis of digital advertising campaigns and proof of violations.
